How it works
Info
Create a KB
Create a KB using either a Managed KB with native connectors, parsing, vector storage, and embeddings, or bring your own vector store for greater control over indexing and retrieval. Connect data sources and keep them synchronized to ensure they are retrieval ready.
Create Managed KB
Integrate it within agents through Gateway
Use your KB within any application or add it as an AgentCore Gateway target to make it available to your agents. Leverage strategies like Agentic Retrieval to access relevant information from your data and support complex, multi-step workflows.
Assess performance
Test your KB to validate retrieval quality pre-deployment, then monitor retrieval metrics, sessions, traces, and spans to understand the performance, latency, and reliability of your KB from development through production.
View observability
Knowledge Bases (KB) (3)
View and manage your KBs. Select up to 5 KBs to test retrieval strategies.
